PROJECTS

Diabetes Prediction

- ◆ Built a machine learning model to predict diabetes using patient health data.
- ◆ Utilized Scikit-learn with logistic regression and decision trees for classification.
- ◆ Aimed at early diagnosis and preventive healthcare applications.

Movie Recommendation System using Machine Learning

- ◆ Developed a personalized movie recommendation engine using user ratings.
- ◆ Applied collaborative and content-based filtering techniques with Scikit-learn & Surprise.
- ◆ Designed to enhance user engagement on entertainment platforms.

Processing Image Data for Deep Learning

- ◆ Preprocessed image datasets using OpenCV and Pillow for deep learning workflows.
- ◆ Applied data augmentation with Albumentations and torchvision for model robustness.
- ◆ Enabled accurate training for tasks like image classification and object detection.

Blink Detection (blink_detection)

- ◆ Created a real-time blink detection system using facial landmarks and Eye Aspect Ratio (EAR).
- ◆ Used OpenCV and Dlib for eye tracking and frame analysis.
- ◆ Useful for driver drowsiness detection and accessibility tools.
